

## 2025 Tariff Update

Significant industrial tariffs, the exact rates and effective dates which remain in flux, are unsettling for all of us. We value our business relationship and are prepared to assist you in navigating through the uncertainty and mitigating the impact tariffs may have on your needed components.

Our priority is to be transparent in how we will manage tariffs. When and while in effect, tariff pass-through costs will not be reflected in an items' price. Rather, tariffs will be listed as a separate line-item charge for each tariffable item. This approach enables us to remove tariff pass-through costs if and when tariffs rates are changed or suspended.

However, please know that the stated or potential tariff rates imposed on certain manufacturer electronic components from global manufacturers will impact your prices at a significantly lower rate. For example at a tariff rate of 25% the impact on your prices will not exceed 15%.

Please reach out to your sales contact to determine the impact of tariffs on your specific component needs. We are ready to assist in any way we can.
